Features / Bug Fixed Snippet

Task 1 - Core Pac-Man Gameplay: Implemented the playable Pygame maze with grid-based player movement, wall collision, pellet collection, score tracking, keyboard controls, player rendering, game timing, reset handling, and win/lose states.

Task 2 - Ghost Behaviour: Implemented four ghosts — Blinky, Pinky, Inky and Clyde — with individual target logic, chase/scatter corner targeting, ghost-house exit/release timing, direction selection, reverse movement, and collision behaviour.

Task 3 - Power Pellets, Lives and Frightened Mode: Implemented power-pellet frightened mode, ghost reversal, frightened ghost movement, eating frightened ghosts for bonus score, player/ghost collision handling, lives, respawn, and game-over behaviour.

Task 4 - UI, Integration and Final Fixes: Integrated the completed features into one game loop and added the score/lives HUD, reset control, win/game-over messages, animated Pac-Man mouth, frightened-ghost flashing, and extension hooks for ghost colours and pellet-eaten effects.

Bug Fixes / Preservation: Preserved player movement, pellet collection, ghost movement, collision handling, respawn, reset, win and game-over functionality. The final project was integrated without replacing the existing Pac-Man implementation with an unrelated game.

Testing Completed

Player movement and wall collision; pellet and power-pellet collection; frightened mode and ghost reversal; ghost chase/scatter movement and release timing; frightened ghost collision/eating; player collision and life loss; respawn and R reset; all-pellets win condition; zero-lives game-over condition; score/lives HUD; final integrated game flow.
